The spy who was on the roof saw the agent who had the binoculars.

- c. The spy saw the agent with the binoculars on the roof.

The spy who was on the roof used the binoculars to see the agent.

- d. The spy saw the agent with the binoculars on the roof.

The spy used the binoculars that were on the roof to see the agent.

Extra Credit (5 points)

In addition to the four interpretations above, consider the colour-coded sentence below:

* The spy saw the agent with the binoculars on the roof.

If you think it does not work:

This reading is logically possible but **not the preferred interpretation** in English. English listeners strongly prefer attaching a **modifier** to the **nearest** noun. So, the sentence is first parsed as: the agent with the binoculars, instead of the spy with the binoculars.

To obtain the intended hard reading, the listener must mentally detach with the binoculars from agent and reinterpret it as modifying saw / spy. That extra processing effort makes the reading feel **less natural**.

If you think it works:

We can paraphrase it to make it more understandable: Using binoculars, the spy saw the agent, who was on the roof. The phrase with the binoculars can modify saw and if we have a clear context as follow:

“The spy grabbed the binoculars. The spy saw the agent with the binoculars on the roof.”

Then the context can bias the reading and how we actually pronounce the sentence might also give us a less ambiguous interpretation.
